

SS2V70-200W Speaker Selector

The SSV2V70-200W is a compact 70V speaker selector featuring two independent zones controlled by a 200-Watt 70V mono volume control with a rotary-style knob. Simple in form and function, this unique speaker selector borrows power from a 70V amplifier and distributes the power to twice the number of potential speakers as our current SS2V70-100 Speaker Selector. This single-source selector includes front-mounted Zone 1 and Zone 2 On/Off buttons and dual volume controls so you can listen to audio at low volume in one zone and a higher volume in another.

SPECIFICATIONS
